**Series: Jyotish About Ayanamsa and "Sidereal Zodiac"; the Sky  
never lie,**

**The problem is that “Jyotish” astrologers never look at the sky**

**Vedic Astrology is certainly the oldest, most elaborate, complicated and precise astrology, what makes it correct, unique and saves it is the nakshatras and dasa system, for predictions especially. The problem is that they have a different zodiac system aligned to the constellations instead of the equinoxes. Is it correct?.....let us see.**

**Video lesson ; The ayanamsa cannot apply to both the stars and the  
zodiac**

**This is part of a series to understand what is ayanamsa, How it is misunderstood and applied erroneously to both the zodiac and the nakshatras in**

Jyotish.

The following short video is an accelerated **animation of the sky over 5700 years in 1 mn.**, it will show you what's happen in the sky, how the equinoxes are shifting backwards from the background of the unchanging celestial sphere of the stars.

**Conclusion once you finish viewing the video;** Ayanamsa or declination of equinoxes (or solstices) is the retrograde motion of the equinoxial point in regard to the stars, that means that the spring equinox will not fall in the same star or nakshatra as time passes, the vernal equinox will fall in previous stars or Nakshatras, **That proves that the Sun at the equinoxes, including the whole Bhachakra, ecliptic or zodiac with the solar system and planets in there, will fall in previous stars as time passes and proves the beginning of Asvini never stays at the beginning of the equinoxes, So the ayanamsa cannot apply to both the stars and the zodiac, as we will witness.**

**More conclusions;** Stars are going ahead of the equinoxes (same as equinoxes

going retrograde), but in order to keep the illusion that equinoxes and zodiac have to be permanently aligned with the Nakshatras, in the sky (let say; artificially keeping  $0^\circ$  Asvini at  $0^\circ$  Aries), the Hindu “Pandits” and Jyotish “Gurus” are doing **the 1<sup>st</sup> mistake**; to “modify the sky” and force the Sun and the Bhachakra (ecliptic or zodiac) to align with the stars by applying the ayanamsa to the zodiac as well; adding  $23^\circ$  or so (to align Asvini with  $0^\circ$  Aries, and so on...), which did not happened in the sky as there is a constant shift between the Nakshatras and the Bhachakra (ecliptic or zodiac).

The 1<sup>st</sup> mistake done; The Sankranti’s (Sun ingress into a new sign) not corresponding to their “sidereal zodiac” anymore because the defective Jyotish software’s shifted the real Bhachakra (ecliptic or zodiac), so to rectify the 1<sup>st</sup> mistake they create **another 2<sup>nd</sup> mistake** by shifting the dates of the Sankranti’s by 23 days ahead (if ayanamsa is  $23^\circ$ ) in order for that date to fit in the wrong Zodiac already shifted  $23^\circ$  ahead (1 day of Sun =  $1^\circ$ ), but "Two wrongs don't make a right". The patching work did not fit the reality, so the Holy Sankrantis are still 23 days wrong. Of course, most ignorant people will swallow the mainstream belief, without referring with the Vedas and never verifying the sky themselves.

Now the Vedic and universal astronomical definitions of Vishuva, Ayana and Sankranti (Equinox, Solstice and Sun ingress in the tropical zodiac) being wrong ,

they have to declare the Sastras are wrong by committing a **3<sup>rd</sup> mistake** they have to twist the Shastra definitions by saying; Vishuva, Ayana and Sankranti belong to the so-called “sidereal zodiac”. That is for example; “the spring equinox” happens in the beginning of the constellation Aries (0° sidereal Aries) not in 0° tropical Aries ; another lie contradicting the visual evidence and undermining the very basic foundation of Jyotish in the Vedas.

**Test and verify yourself the ayanamsa**, declination of equinoxes for any time, any date, any place for a visual sky map with **Starry Night Pro Plus** 8.1.1 for Win. or Mac with serial crack (it is used in Universities);

<https://mega.nz/folder/O9h1wZ4L#H0wZA7sHPaCVfpftyx2BbA>

\_or download for free **Stellarium** for mac , windows linux many versions for free;

<https://stellarium.org/>

(not much user friendly and not as professional); Latest version to visualise

Nakshatras and padas here <https://stellarium.org/release/2025/03/23/stellarium-25.1.html>

(win 10 or macOS 11.0 or above)

<https://stellarium.org/release/2024/12/22/stellarium-24.4.html> (version 24.4.0) specifically for Windows 7/8/10 32-bit systems

\_or a free one; **Sky Chart** / Cartes du Ciel; <https://www.ap-i.net/skychart/en/start>

<https://sourceforge.net/projects/skychart/> Windows, Mac, Linux

downloads; <https://sourceforge.net/p/ccdciel/activity/?page=0&limit=100#680ccbeec8642489bb4219f7>

\_or **Sky safari 6** pro (paid), on apple store (worth it), available also for iOS and android (see the whole sky on a cell phone.....good luck)

**Now the proof is in the pudding, If You apply the ayanamsa to the stars only, not the zodiac, You will then be amazed of how much more accurate is in your reading of the charts, the only existing astrology software that can make the proper calculations is;**

**Kala; jyotish astrology software cracked, to be used with recommended settings otherwise calculations then the readings will not be accurate,**
